Developed by CIC Digital LLC, an affiliate of the Trump Organization, Official Trump (\$TRUMP) has attracted significant attention, with its market capitalization reaching \$13.82 billion, positioning it as the 15th largest cryptocurrency and second largest meme coin by market value. According to Donald Trump, this digital asset is celebrating “WINNING” the presidential election and his upcoming inauguration.

Notably, this token’s website includes a disclaimer, stating \$TRUMP is “not intended to be, or the subject of” an investment opportunity nor a security of any type, and is “not political and has nothing to do with” any political campaign, political office or government agency.

Since its launch, Official Trump (\$TRUMP) has rapidly gained market traction, soaring by 12000% . At present, \$TRUMP is one of the most popular meme coin projects in the market.

\$TRUMP Tokenomics

According to the coin’s website, The meme coin’s developers have limited the supply of \$TRUMP to

200 million coins at launch before expanding the overall supply to 1 billion over the next three years.

The remaining 80% of tokens that have yet to be publicly released are owned by the Trump Organization affiliate CIC Digital LLC and Fight Fight Fight LLC, a company established in Delaware on Jan. 7, according to state filings, and both companies will receive an undisclosed amount of revenue derived from trading activity.

Official TRUMP (\$TRUMP) Price Analysis

The recent surge has propelled \$TRUMP beyond critical resistance levels. According to Fibonacci retracement analysis, the token has surpassed the 23.6% retracement level at \$64.44, with the next resistance identified at \$76.81. A breakthrough above this level could pave the way for further gains towards \$83.85 and potentially up to \$91.83.

However, immediate support is established at the 38.2% Fibonacci retracement level of \$56.78, with additional downside support located at \$50.59 (50% level) and \$44.43 (61.8% level).

The 50-period Exponential Moving Average (EMA) positioned at \$25.03 indicates that the recent rally may have outstripped sustainable growth.

The emergence of a bullish engulfing pattern on the hourly chart suggests ongoing buying interest; however, traders should exercise caution as profit-taking near resistance levels could trigger short-term corrections.

If \$TRUMP maintains its position above \$64.44, bullish sentiment is likely to endure; conversely, a decline below key support levels could initiate a more significant pullback.

What Factors Affect Official TRUMP Price?

As a kind of digital asset, there are a number of variables in the cryptocurrency market that can drive the price of Official TRUMP (\$TRUMP) upwards or downwards. Here is breakdowns about factors influencing Official TRUMP (\$TRUMP) 's price trend:

- **Community sentiment:** Meme coins thrive on hype and speculation, so \$TRUMP plans to spread project awareness and foster loyalty with continued marketing efforts and community rewards. It's worth noting that bullish community sentiment often results in price increases, while bearish sentiment can lead to price drops.
- **Adoption:** Whether the demand for more \$TRUMP increases or decreases depends greatly on growing adoption. Wider adoption of \$TRUMP by crypto enthusiasts could drive the price up.
- **Regulations:** Government regulations around cryptocurrency can significantly exert profound influence on the price of cryptos, including \$TRUMP token. Given Trump's high profile, regulators may take a keen interest in the project's compliance measures.

- **Liquidity Risks:** With a large portion of tokens held by a few entities, sudden sell-offs could lead to price swings.
- **Exchange Listings:** Listing on major crypto exchanges could increase \$TRUMP's visibility and accessibility- potentially propelling the token's demand and price.
- **Tokenomics and vesting schedule:** Strategic token distribution and allocation discourage immediate selling pressure and incentivize holding. A controlled release schedule (vesting) also prevents a price crash by slowly introducing tokens into the market.
