## Latest News & Updates on Pi Network: Pi Network Open Mainnet Goes Live

At 8:00 AM UTC on February 20, Pi Network officially launched its open mainnet, marking a long-awaited milestone for users who have been mining the cryptocurrency for the past six years. With the transition to an open network, both early adopters and the broader market are now keen to see how Pi will integrate into the wider crypto ecosystem.

The launch sparked a surge of excitement, leading to a 36% increase in Pi Coin's value within the first hour. On Bitget, prices peaked at \$3.41, reflecting the years of anticipation leading up to this moment. However, the price quickly became highly volatile, with PI reaching \$1.97 before dropping to \$1.80 on OKX and \$1.70 on Bitget.

These fluctuations stand in stark contrast to pre-launch speculations, where IOU prices were projected between \$60 and \$70. As trading stabilizes, the market will be closely watching Pi Network's real-world adoption and integration into the broader cryptocurrency landscape.

## Will Binance List Pi Network?

The availability of Pi Coin (PI) on centralized exchanges (CEXs) has significantly influenced its price movements. Major platforms such as OKX, HTX, Bybit, MEXC, Gate.io, BitMart, and Bitget have already listed the token, contributing to increased trading activity. However, Binance, the world's largest crypto exchange, has taken a more cautious approach.

Will Binance list Pi Coin? Binance asked its community if it should list it. "We want to hear from you! Should PI be launched on Binance?" The exchange asked on X, while attaching a link to vote on Feb. 12.

A potential Binance listing could lead to a significant surge in PI's trading volume. However, if trading volume increases while PI's price declines, it could further accelerate the ongoing correction in the cryptocurrency's value.

The lack of a Binance listing poses challenges for liquidity and credibility. Despite this, Pi Network has actively expanded its market presence, particularly following the price surge that accompanied its listing on platforms like OKX. To enhance its standing, strategic partnerships and leveraging recent speculations about a potential Binance listing could prove crucial. Such developments may attract institutional interest and add legitimacy to the project.

The coming days will be pivotal in determining whether Pi Network can sustain its current price levels once the initial volatility subsides. While early investors remain enthusiastic, the market will need time to evaluate the cryptocurrency's long-term value and adoption prospects.

Experts predict heightened volatility in the \$80-\$120 range in the weeks following the launch, driven by trading activity and market sentiment. As liquidity grows with exchange integrations, a push toward \$150 or even \$200 could materialize if momentum holds. By mid-2025, accelerated adoption might lift Pi Coin to the \$150-\$200 range, with some optimistic forecasts eyeing \$300 by year-end.

Experts anticipate increased volatility in the \$80-\$120 range in the weeks following the Pi Coin mainnet launch, driven by heightened trading activity and shifting market sentiment. As liquidity improves with further exchange integrations, Pi Coin could potentially break past \$150 and even approach \$200 if bullish momentum sustains.

Looking ahead to mid-2025, accelerated adoption and ecosystem development may push Pi Coin into the \$150-\$200 range. Some optimistic forecasts suggest that if strong market demand persists, PI could reach \$300 by year-end.

As of writing the article, PI is traded at \$ 0.7416, boasting a market cap of \$ 5.0B, and witnessing a hefty 24-hour trading volume of \$ 300.4M. PI Token saw a 24-hour change of 0.57%, with minor fluctuations of 1.50% over the past hour.

## Pi Network Price Prediction 2026

While Pi Network has generated significant buzz with its 100 million+ user base, it continues to face intense scrutiny due to its ambitious claims and market entry strategies. Successfully navigating the

highly volatile crypto landscape and establishing itself as a credible player requires more than just innovative technology—it demands strong regulatory compliance, strategic market positioning, and a focus on building user trust.

By 2026, Pi Network could see further development. Its major updates and technology advance may drive \$Pi to a maximum price level of \$ 1.1297. However, under a bearish circumstance, the lowest price for \$PI this year could fall to \$ 0.6253, with an average price hovering around \$ 0.9514.

## Pi Network Price Prediction 2030

By 2030, Pi Network could become a widely used digital currency, influencing its price significantly. If Pi gains global adoption in payments and smart contracts, we could see a maximum price level of \$ 1.5826 per coin. However, under a bearish sentiment, the lowest price for \$PI this year could fall to \$ 0.9130, with an average price hovering around \$ 1.3699.

## Pi Network Price Prediction 2050

Looking ahead to 2050, Pi Network has massive potential, but its success depends on how well it integrates into the real world. If Pi becomes a widely used currency and secures strong exchange support, a \$500+ valuation is not impossible. If Pi becomes a dominant crypto like Bitcoin or Ethereum, its value might even cross \$2,000+. Therefore, based our technical analysis, it is estimated that \$Pi would be traded between \$ 2.5241 on the lower end and \$ 4.8370 on the high end, with an average price hovering around \$ 3.9638 in 2050.

There is large uncertainty about the future price of Pi token, as the cryptocurrency market changes rapidly. With this in mind, we have made both more bullish and more bearish forecasts for Pi coin based on a variety of different scenarios.
